## News Release

---

FOR IMMEDIATE RELEASE

### **Low-maintenance, high-performance intake screens available from Delta Screens**

HOUSTON, TEXAS, August 22, 2011 — Delta Screens, a worldwide screen manufacturer, announced today the availability of their high quality passive, t-shape intake screens. Installed parallel to the current flow, the proven design efficiently collects a consistent rate of incoming water flow without plugging or harming aquatic life.

With no moving parts to jam, clog or wear out, a Delta Screens intake screen requires little to no maintenance. Meanwhile, its simplistic design maintains constant flow rates across the length of the screen, which is critical to maintain average flow velocity.

In the rare event that objects or debris should ever begin collecting against the screen's outer surface, a simple backwash system can be supplied. Certain specialty treatments and materials can also be used to prevent bio-fouling and aquatic attachments. Further, the use of materials, such as 304 stainless steel, makes these intake screens usable in brackish or saltwater applications.

#### **About Delta Screens**

Headquartered in Houston, Texas, Delta Screen & Filtration, LLC (dba Delta Screens) provides custom and standardized screen solutions for water wells, oil and gas wells, and a variety of water and wastewater treatment applications the world over. For more information visit [www.deltascreens.com](http://www.deltascreens.com), email [sales@deltascreeninc.com](mailto:sales@deltascreeninc.com) or call 713-856-0300.
