

 **Delta OUTLET Basket Screens****PREVENT COSTLY  
MEDIA MIGRATION.**

In downflow processes, outlet baskets keep expensive treatment media from migrating out of internal vessels. Delta Screens outlet baskets feature a continuous slot design that prevents plugging and provides a large open area for unrestricted flow. Slot widths can be customized to retain your specific media while providing the necessary flow rate.

Each outlet basket is precision welded for superior strength. This ensures that Delta Screens outlet baskets resist collapse under even the heaviest loads and highest temperatures. Delta Screens can manufacture outlet baskets in a wide variety of materials and sizes to suit your application needs.

*To capture contaminants in downflow processes.*
