

## Delta Sugar Processing Screens

### OPTIMIZING YOUR PROCESSING REQUIREMENTS.

Delta offer a wide range of wedge wire screens for sugar processing applications including: dewatering, extraction, separation and filtration. We build screens to your exact specification to accommodate precise media retention and flow rate requirements. You can count on products that provide high strength, exceptional durability, and require minimal maintenance.

#### **Centrifuge baskets**

Centrifugal baskets are used to separate raw sugar crystals and molasses. Precise slot tolerance ensure the raw sugar is retained, while the mother liquor, or molasses, passes through the basket.

#### **Rotary screens**

Internally fed rotary sieves are widely preferred in the food and sugar processing industry. Due to the profile of the shapes wires, it is almost impossible for the sieve to become clogged ensuring a high permeability rate.

#### **Sieve bend static screens**

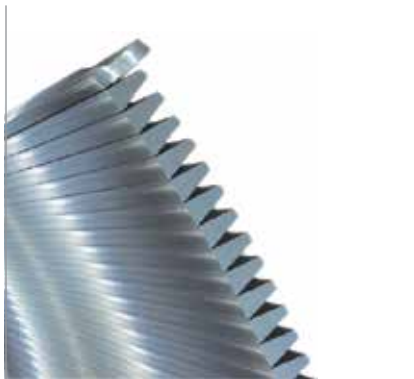

With no moving mechanical parts, sieve bend screens provide efficient, gravity fed separation, and economical screen replacement design.
