Low-maintenance, high-performance Rotary Screens from Delta Screens & Filtration

HOUSTON, TEXAS, February 05, 2016 — Delta Screens & Filtration internally fed rotary screen is a robust piece of equipment that features a wedge wire construction for extreme durability. Designed to be virtually maintenance free, this advanced design can provide drier recovered solids and more effective dewatering through the screens internal surface length.

Delta's precision wedge wire products provide solutions to the most challenging screening and separation processes where high throughput, precision, dewatering efficiency and low maintenance are the issues that matter.

Manufactured in variety of corrosion resistant materials and configurations, new and replacement rotary screens can be manufactured to your process requirements and specifications.

Applications include: vegetable matter, meats, poultry, seafood, snack foods, fruit, pulp juice and rendering operations.

Delta Screen & Filtration are dedicated to improving our customers return on investment through affordable innovative design and high performance screen products shipped on time – every time!
