

SPE Workshop: Enhancing Life Cycle Costs of Thermal Wells Through Drilling and Completions
June 13-14, 2017, BMO Centre, Calgary, Alberta, Canada

Delta Screens participates as a Sponsoring Member at the SPE Thermal Well Drilling and Completions Workshop: Enhancing Life Cycle Costs of Thermal Wells through Drilling and Completions, Calgary, Canada, May 13-14, 2017

Workshop Participation

Challenged by a market in turmoil due to oil price volatility and tight global financial markets, the in-situ thermal heavy oil industry must find a way to become more competitive. Only through increasing operational efficiency and reducing costs through well design and new technology, as well as elevating reliability and improving communications will the industry be able to compete in the global energy market.

The two-day workshop attracted over 125 attendees from operating, service and consulting companies, regulatory authorities, research organizations and academia in an open and collaborative environment. The workshop was considered a successful event and provided an opportunity to integrate geosciences with reservoir, drilling, completion and production engineering disciplines.
