

Delta NOZZLES

MEET YOUR NEW RETENTION STRATEGY.

Nozzles are an ideal solution for applications with heavy amounts of media whose weight could compromise the integrity of unsupported screens. That's because nozzles are affixed to durable steel plates that can withstand great loads without damage. Using the nozzle method gives you the reliability you want with the flow rate you require.

Delta Screens manufactures nozzles using a variety of materials to ensure long life and reliable performance. The non-plugging continuous slot design makes Delta Screens nozzles ideal for applications that involve the retention of sand, activated carbon, ion exchange resin and more. They withhold the media while allowing the treated liquid to pass through. If needed, Delta Screens can also custom manufacture nozzles to your exact specifications, including material, fitting type and sizes.
